

Finreon Tail Risk Control® (World)

28/02/2025

Strategy

The Finreon Tail Risk Indicator (TRI) measures the probability of large tail events (crashes) on equity markets systematically and on a daily basis by means of various market factors. Accordingly, the fund's equity quota is set between 0% (high measured risks) and 100% (low measured risks), depending on the prevailing market regime as indicated by the TRI.

The equity share is held via investments in a diversified portfolio of passive institutional funds, which represent a global equity portfolio (Equities World ex-CH). The cash portion is invested in a portfolio of money market instruments. The strategy is suitable for investors who intend to participate in the risk-controlled performance of the global equity market while avoiding large draw-downs. Total risk born by the investor is similar to a benchmark consisting of 50% equity and 50% SOFR ("Benchmark 50/50").

Current month

In February, the Finreon Tail Risk Indicator measured green throughout the month and it is green (low crash risk) at the end of the month. The Finreon Tail Risk Control® strategy is therefore 100% invested in the world equity market.

The Finreon Tail Risk Control® (World) strategy returned -0.8% in February, underperforming the benchmark return of -0.1%.

	Tail Risk Control (World) ¹	Benchmark (50/50)
Return current month	-0.8%	-0.1%
Return year-to-date	2.6%	1.6%

Finreon Tail Risk Control® concept

- **Tail Risk Indicator:** The probability of severe tail events (crashes) is measured by means of various market factors on a daily basis and is illustrated by a risk signal light.
- **Risk signal:** The Finreon Tail Risk Control® strategy differentiates between five risk regimes and accordingly controls the equity quota: Ranging from green (low probability of tail events = 100% equities) to red (high probability of tail events = 0% equities).
- **Implementation via institutional funds:** Risk-controlled equity exposure of 0-100% in a portfolio of passive equity funds (Global equities ex-CH) resp. in money market instruments.
- **Benchmark:** The benchmark is 50% Global equities ex-CH NR / 50% USD SOFR TR - the strategy has an average equity exposure of 50% and therefore a long-term volatility which corresponds to a 50% equity investment ("Benchmark 50/50").
- **Drawdowns:** Larger drawdowns should be avoided. Risk regimes can mostly be recognized.

Development of the Finreon Tail Risk Indicator

The Finreon Tail Risk Control® strategy recognizes risk regimes on a consistent basis. During both the burst of the internet bubble in 2001 and the financial crisis the Finreon Tail Risk Indicator indicated a high tail risk. An investment according to the Finreon Tail Risk Control® strategy experienced substantially less severe drawdowns.

Live-signals TRI from 09/2011, backtesting data Finreon Ltd
